DECLARATION

We hereby declare that the SRS, submitted along with the **Software Engineering (2301CS405)** for entitled “**Online Shopping system**” submitted in partial fulfilment for the Semester-5 of **Bachelor Technology (B. Tech)** in **Computer Science and Engineering (CSE)** Department to Darshan University, Rajkot, is a record of the work carried out at **Darshan University, Rajkot** under the supervision of R. B. Gondaliya and that no part of any of report has been directly copied from any students’ reports, without providing due reference.

(Vegad Jenil Ashobhai)

Vegad Jenil A

Date: 26/03/2026

**Computer Science & Engineering
Department
Darshan University**

CERTIFICATE

This is to certify that the SRS on “**Online Shopping system**” has been satisfactorily prepared by **Vegad Jenil Ashokbhai (24010101300)** under my guidance in the fulfillment of the course **Software Engineering (2301CS405)** work during the academic year 2025-202.

ACKNOWLEDGEMENT

I wish to express my sincere gratitude to my project guide Prof. R. B. Gondaliya and all the faculty members for helping me through my project by giving me the necessary suggestions and advices along with their valuable co-ordination in completing this work.

I also thank my parents, friends and all the members of the family for their precious support and encouragement which they had provided in completion of my work. In addition to that, I would also like to mention the Darshan University personals who gave me the permission to use and experience the valuable resources required for the project from the University premises.

Thus, in conclusion to the above said, I once again thank the faculties and members of **Darshan University** for their valuable support in completion of the project.

Thanking You

Vegad Jenil A

ABSTRACT

The Online Shopping System is designed to digitalize and simplify the complete shopping experience by providing a centralized, computerized platform for product browsing, ordering, and management. This system replaces the limitations of traditional in-store shopping with an easy-to-use online interface accessible from anywhere. The platform includes essential features such as secure user accounts, instant product search, real-time inventory updates, and a streamlined checkout process. It also provides a dedicated admin module that allows administrators to oversee the entire system, manage product listings, track orders, handle user queries, and maintain overall platform performance.

Core functionalities include adding, updating, viewing, and deleting product information, managing user details, monitoring stock availability, and processing customer orders. Customers can log into their accounts to browse products, view detailed descriptions, add items to their cart, track placed orders, manage addresses, and request support when needed. The admin can generate multiple reports such as sales reports, product performance reports, customer reports, and inventory reports for analytical and decision-making purposes.

The primary objective of this system is to minimize manual workload, enhance business efficiency, and provide users with a fast, convenient, and reliable online shopping experience.

1 Introduction

1.1 Product perspective

This project transforms the traditional in-store shopping and manual product management process into a fully web-based application, enabling users to browse items, check availability, place orders, and track their purchases online. The system operates as a multi-user environment that supports both customers and administrators simultaneously. It handles all essential e-commerce functionalities such as product catalog management, order processing, inventory tracking, user authentication, and payment handling. The platform is designed to efficiently support the core operations of a small to medium-scale online retail business and provides a structured, automated approach to managing products, customers, and sales activities.

1.2 Product features

1.2.1 There are three different users who will be using this product:

- **Admin:**
Manages the entire product database, oversees all transactions, and maintains both buyer and seller records. The admin ensures smooth platform operations, verifies users, and handles system-level configurations.
- **Buyers:**
Can be individual customers or business/industrial clients who purchase products or supplies—either in normal quantities or in bulk. Buyers can browse items, place orders, track deliveries, and manage their shopping activities.
- **Sellers / Suppliers:**
Can be individual merchants or large-scale manufacturers who list, sell, and manage their products through the platform. They can update stock, modify product details, track orders, and handle customer requests.

1.2.2 The features that are required for the Admin are:

- Monitoring and controlling all product-related information, including quality checks, stock quantity, and customer service standards.
- Handling customer issues efficiently through an integrated support system, including a 24/7 chatbot for quick resolution.
- Providing and supervising the real-time order tracking system to ensure accurate delivery updates.
- Accessing detailed records of every buyer and seller, including their purchases, transactions, and activity history.
- Managing the platform's key modules such as product catalog management, order processing, and system-wide queries.
- Reviewing and approving high-value or bulk orders whenever necessary to maintain platform security and prevent fraud.

1.2.3 The features that are required for the Buyers are:

- A powerful product search system with filters and instant suggestions.

- Personalized recommendations, including new arrivals and trending products.
- A wishlist feature for saving items for future purchase.
- A shopping cart system that updates product details, pricing, and availability in real time.
- Access to complete product information, including specifications, reviews, and seller details.

1.3 Functional Requirement

1.4 1.3.1 Admin

- Manages all buyers, sellers, and product data within the system.
- Creates, updates, activates, deactivates, or deletes buyer and seller accounts.
- Verifies seller registration details and approves or rejects seller accounts.
- Controls product approval including quality verification, category assignment, price validation, and stock updates.
- Edits or removes inappropriate, duplicate, or fraudulent product listings.
- Manages payment gateways, transaction monitoring, refund rules, and settlement processes.
- Approves or rejects order cancellation, return, and refund requests.
- Monitors and handles disputes between buyers and sellers.
- Detects and prevents fraudulent activities such as fake accounts, fake reviews, and suspicious transactions.
- Generates and analyzes reports related to sales, orders, revenue, and user activity.
- Configures discount policies, promotional offers, and seasonal sales campaigns.
- Manages shipping policies, delivery charges, and tax configurations (GST).
- Maintains system security policies including user access control and data protection measures.
- Monitors system logs, performance, and overall platform health.
- Performs database backup, recovery, and maintenance operations.
- Manages notifications, banners, and homepage content of the platform.

1.5 1.3.2 Seller

- Registers and creates a seller account on the platform.
- Submits business details and required verification documents for approval.
- Adds new products with complete details including name, description, category, price, stock quantity, and images.
- Updates product information such as pricing, stock availability, specifications, and images.
- Deletes or temporarily disables product listings when required.
- Manages inventory levels and receives alerts for low stock.
- Views and manages incoming customer orders.
- Updates order status (Processing, Packed, Shipped, Delivered).
- Generates shipping labels and coordinates product dispatch.
- Views payment status and tracks settlement or payout details.
- Responds to customer queries related to their products.
- Handles return and replacement requests as per platform policies.
- Reviews sales performance reports and revenue summaries.
- Participates in promotional campaigns and discount offers managed by admin.
- Maintains product quality standards and complies with platform rules and regulations.

1.6 Non-Functional Requirement

- **Security:** Encryption, secure payments, OTP login, fraud detection
- **Performance:** Fast search, low load time, scalable architecture
- **Reliability:** 99% uptime, backup & recovery system
- **Usability:** Mobile-friendly UI, simple navigation
- **Compatibility:** Support Android, iOS, and web browsers
- **Localization:** Multi-language support (English, Hindi, Gujarati, etc.)
- **Data Privacy:** GDPR/IT Act compliance, user-data processing transparency

Figure 3.1-1 Screen-1: Registration Form

Purpose: This form will allow the target end-users to register in the system. To register , the following information will be encoded in the system.

Table 3.1-1 Screen element of Registration form

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	Username	Textbox	M	1	Username field should be editable and accept a valid username for the online shopping account.
2	Email	Textbox	M	1	Email field should be editable and accept the email in proper format for communication and login.
3	Mobile number	Textbox	M	1	Mobile number field should be editable and accept a valid mobile number for user contact and verification.
4	password	Password	M	1	Password field should be editable and accept the password and display as star or dot.
5	Confirm Password	Password	M	1	Confirm password field should be editable and must match the entered password.
6	I agree to the terms and conditions	Checkbox	M	1	Checkbox for accepting terms and conditions of the online shopping system.
7	Already have an account? Login	Link	-----	-----	Link to navigate to the login page for existing users.
8	Register	Button	-----	-----	Register is a button for store the entered data into database.

3.2 Screen-2: Online Shopping Dashboard

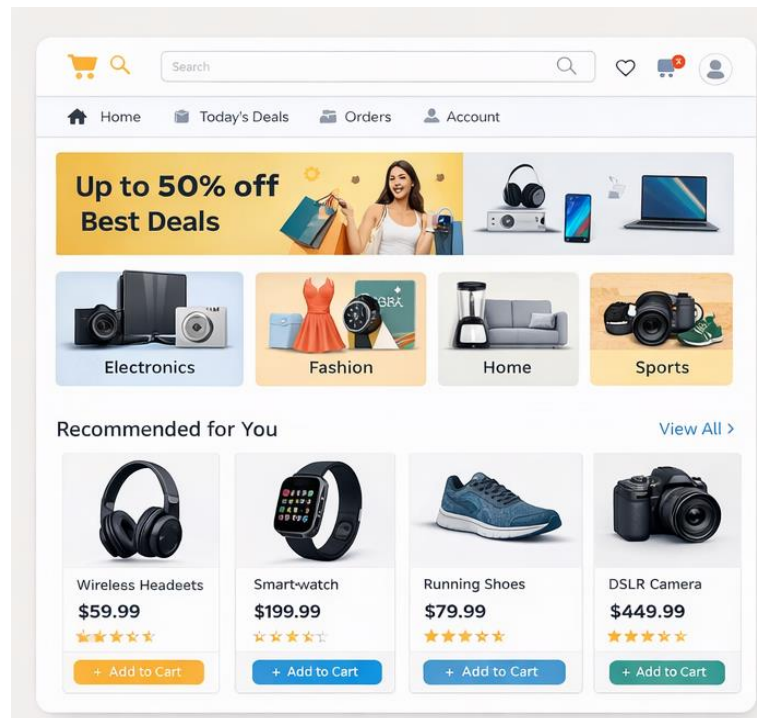

Figure 3.2-1: Screen-2 – Online Shopping Dashboard

Purpose: This screen represents the **Dashboard of the Online Shopping System**. It allows users to browse different product categories, view ongoing offers, check recommended products, manage orders, and access account-related features. The dashboard serves as the main landing page after successful login and provides quick access to shopping functionalities.

Table 3.2-1 Screen Elements of Online Shopping Dashboard

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	Search Bar	Textbox	M	1	Allows users to search products by name, category, or keyword.
2	Product Categories	Button/ Card	M	N	Displays different product genres such as Electronics, Fashion, Home, and Sports for easy navigation.
3	Offers Banner	Image Banner /	O	1	Displays ongoing discounts, deals, and promotional offers.
4	Product Price	Label	M	1	Displays the price of each product listed on the dashboard.
5	Recommended Products	Card View	O	N	Shows recommended products based on user preferences and browsing history.
6	Add to Cart	Button	M	N	Allows users to add selected products to the shopping cart.
7	Orders	Link	O	1	Navigates the user to the order history and current orders page.
8	Account	Link	O	1	Provides access to user profile, address, and account settings.
9	View Products All	Link	O	1	Navigates to the complete product listing page.

3.3 Screen-3: Cart

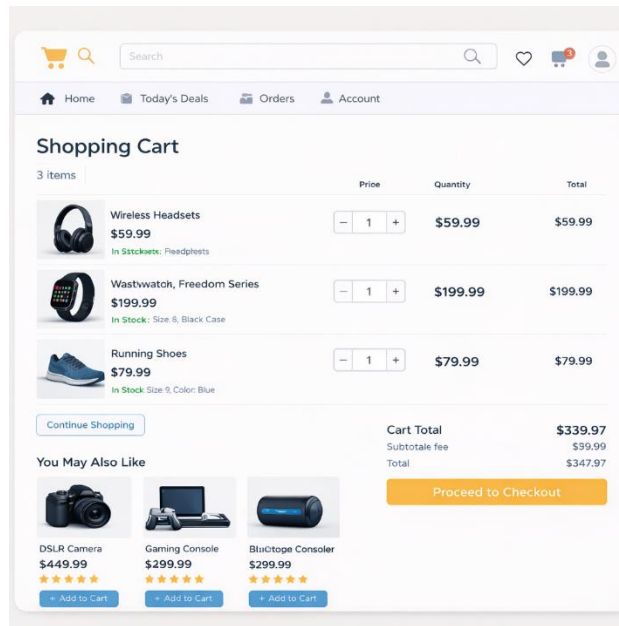

Figure 0-1 Screen-3: Add borrower book

Purpose The Cart Page module allows the buyer to review selected products before checkout. The user can update product quantities, remove items, view pricing details including subtotal and total amount, and proceed to the checkout process. This module ensures accurate order calculation and provides the final confirmation step before payment.

Table 0-1 Screen element of Add borrower book

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	Page Title (Shopping Cart)	Label	M	1	Displays the title of the page.
2	Product Image	Image	M	N	Displays image of each product added to cart.
3	Product Name	Label	M	N	Displays name of the product.
4	Product Price	Label	M	N	Displays price of individual product.
5	Stock Status	Label	M	N	Shows availability status (In Stock / Out of Stock).
6	Quantity Selector	Numeric Stepper (+ / -)	M	N	Allows user to increase or decrease product quantity.
7	Remove Item	Button	O	N	Removes selected product from cart.
8	Subtotal	Label	M	1	Displays total cost of all products before tax/shipping.
9	Shipping Charges	Label	O	1	Displays delivery fee (if applicable).
10	Discount	Label	O	1	Displays applied discount amount.
11	Total Amount	Label	M	1	Displays final payable amount.
12	Continue Shopping	Button	O	1	Redirects user back to product listing page.
13	Proceed to Checkout	Button	M	1	Redirects user to checkout page.

3.4 Screen-4: Product Detail Page

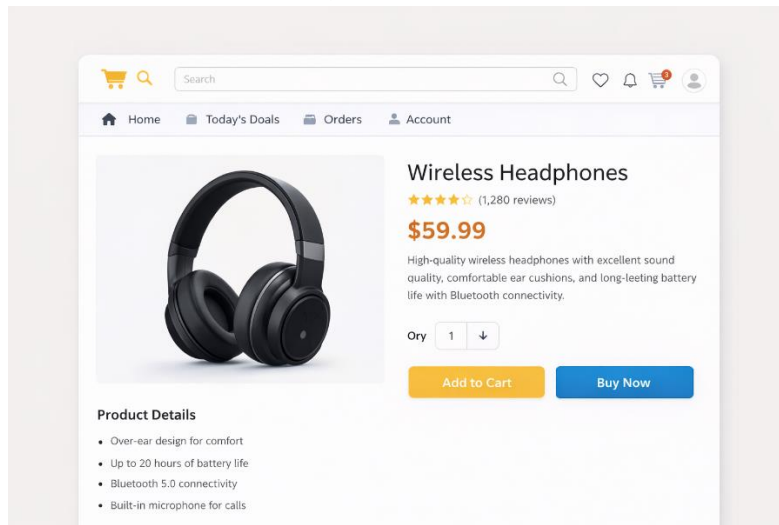

Figure 0-1 Screen-3: Add borrower book

Purpose This module allows the system administrator (or seller) to add, edit, update, or delete product details. The admin can manage product information such as pricing, stock, description, and category.

Table 0-1 Screen element of Add borrower book

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	Product ID	Textbox	M	1	Product ID field should be auto-generated and uniquely identify each product.
2	Product Name	Textbox	M	1	Product Name field should be editable and accept string values only.
3	Category	Dropdown	M	1	Category field should allow selection from predefined product categories.
4	Brand	Textbox	O	1	Brand field should accept string values representing product brand.
5	Price	Textbox	M	1	Price field should accept numeric values only and must be greater than zero.
6	Discount (%)	Textbox	O	1	Discount field should accept numeric percentage values (0–100).
7	Stock Quantity	Textbox	M	1	Stock field should accept numeric values and update product availability status.
8	Product Description	Textarea	M	1	Description field should allow detailed product information.
9	Product Images	File Upload	M	N	Allows uploading one or more product images.
10	Add to Cart	Button	---	---	Adds the selected product to the customer cart.
11	Buy now	Button	---	---	Directly proceeds to checkout process.

3.5 Screen-4: Product Detail Page

The screenshot shows the 'My Profile' page of an online shopping application. The page is divided into a sidebar and a main content area. The sidebar contains navigation links: Home, Today's Deals, Orders, Account, Jason Doe (profile), Dashboard, Profile (selected), My Orders, My Wishlist, Addresses, Change Password, and Logout. The main content area is titled 'My Profile' and includes a profile picture of Jason Doe, his email (jason.doe@example.com), and an 'Edit Profile' button. Below this, there are input fields for First Name (Jason), Last Name (Doe), Email (jason.doe@example.com), and Phone Number (1234567890). A 'Save Changes' button is located next to the phone number field. The Shipping Address is listed as '123 Main Street, Springfield, IL 62701', with an 'Update Mobile Number' link. A 'Login History' section follows, featuring a table with columns for Date & Time, Device, Location, and IP Address. The table lists three login events: April 24, 2024, 10:45 PM (Chrome, Windows 10, Chicago | USA, 192.168.1.10), April 23, 2024, 08:22 PM (Safari | iOS, Springfield, USA, 203.56.78.32), and April 22, 2024, 01:13 PM (Firefox, Windows 10, Chicago | USA, 192.168.1.10). A 'View All' link is provided for the login history.

Figure 0-1 Screen-3: Add borrower book

4 Purpose

The User Profile Page allows the registered user to view and manage personal account information. This module enables users to update their profile details, manage shipping addresses, view order history, monitor login activity, and maintain account security settings. It ensures accurate user data management and enhances account security and personalization.

Table 0-1 Screen element of Add borrower book

Sr.	Screen Element	Input Type	O/M	1/N	Description
1	Page Title (My Profile)	Label	M	1	Displays the profile page title.
2	Profile Picture	Image Upload	O	1	Allows user to upload or update profile image.
3	First Name	Textbox	M	1	Editable field to update user first name. Accepts only alphabets.
4	Last Name	Textbox	M	1	Editable field to update user last name. Accepts only alphabets.
5	Email	Textbox	M	1	Displays registered email (editable based on system policy).
6	Phone Number	Textbox	M	1	Accepts valid 10-digit mobile number.

7	Shipping Address	Textarea	M	N	Allows user to add or update delivery address.
8	Save Changes	Button	M	1	Saves updated profile information to database.
9	Edit Profile	Button	O	1	Enables editing mode for profile details.
10	Order History Tab	Tab Button	M	1	Displays previous orders placed by the user.
11	Login History Section	Display Table	O	N	Shows previous login records (date, device, location, IP).

5 Database design

5.1 List of Tables

- User
- Admin
- Category
- Product
- Cart
- Order
- Payment

Table 5.1-1 Table: User

Column	Data Type	Null	Keys & Constrains	Default Value & Description
UserID	int	NN	PK (Auto Increment)	Unique user ID
FirstName	varchar(100)	NN	—	User first name
LastName	varchar(100)	NN	—	User last name
Email	varchar(150)	NN	Unique	User email address
Password	varchar(255)	NN	—	Encrypted password
Contact	varchar(10)	NN	—	10-digit mobile number
Address	varchar(255)	AN	—	Shipping address
CreatedAt	DateTime	NN	—	Account creation date

Table 5.1-2 Table: Admin

Column	Data Type	Null	Keys & Constrains	Default Value & Description
AdminID	int	NN	PK (Auto Increment)	Unique admin ID
AdminName	varchar(100)	NN	—	Admin name
Email	varchar(150)	NN	Unique	Admin email
Password	varchar(255)	NN	—	Encrypted password

Table 5.1-3 Table: category

Column	Data Type	Null	Keys & Constrains	Default Value & Description
CategoryID	int	NN	PK (Auto Increment)	Unique category ID
CategoryName	varchar(100)	NN	—	Product category name

Table 5.1-4 Table: Product

Column	Data Type	Null	Keys & Constrains	Default Value & Description
ProductID	int	NN	PK (Auto Increment)	Unique product ID
ProductName	varchar(150)	NN	—	Product name
CategoryID	int	NN	FK	Reference of Category Table
Price	decimal(10,2)	NN	—	Product price
StockQuantity	int	NN	—	Available stock
Description	text	AN	—	Product details
ImageURL	varchar(255)	AN	—	Product image path
CreatedBy	int	NN	FK	Reference of Admin Table

Column	Data Type	Null	Keys & Constraints	Default Value & Description
CartID	int	NN	PK (Auto Increment)	Unique cart ID
UserID	int	NN	FK	Reference of User Table
ProductID	int	NN	FK	Reference of Product Table
Quantity	int	NN	—	Number of products added

Table 5.1-6 Table: Order

Column	Data Type	Null	Keys & Constraints	Default Value & Description
OrderID	int	NN	PK (Auto Increment)	Unique order ID
UserID	int	NN	FK	Reference of User Table
OrderDate	DateTime	NN	—	Date of order
TotalAmount	decimal(10,2)	NN	—	Total order amount
Status	varchar(50)	NN	—	Order status (Pending/Shipped/Delivered/Cancelled)

Table 5.1-7 Table: Payment

Column	Data Type	Null	Keys & Constraints	Default Value & Description
PaymentID	int	NN	PK (Auto Increment)	Unique payment ID
OrderID	int	NN	FK	Reference of Order Table
PaymentMethod	varchar(50)	NN	—	UPI / Card / NetBanking / COD
PaymentStatus	varchar(50)	NN	—	Success / Failed / Pending
PaymentDate	DateTime	AN	—	Date of payment

6 Stories and Scenario

6.1 Story-1: Add a Product to Inventory

Story # S1	:	As a Seller, I want to add a new product to my inventory, So that customers can view and purchase it.
Priority	:	High
Estimate	:	L
Reason	:	Essential for sellers to manage and update product listings

6.1.1 Scenario# S1.1

Scenario# S1.1	:	Adding a Product with Valid Information
Prerequisite	:	The seller is logged in to the system

Acceptance Criteria	: The seller navigates to the product management page and selects "Add Product." When: The seller enters valid product details, including name, description, price, stock quantity, and images. And: Clicks the "Save" button. Then: The system successfully adds the product to the inventory and displays a confirmation message.
----------------------------	---

6.1.2 Scenario# S1.2

Scenario# S1.2	: Adding a Product with Missing Information
Prerequisite	: The seller is logged in to the system
Acceptance Criteria	Given: The seller is on the product management page. When: The seller tries to add a product without filling in required details (e.g., missing name or price). Then: The system displays an error message and prevents the product from being added.

6.1.3 Scenario# S1.3

Scenario# S1.3	: Adding a Duplicate Product
Prerequisite	: The librarian is logged into the library management system and the librarian is on the library catalogue management page
Acceptance Criteria	Given: The seller attempts to add a product with the same name, SKU, and other attributes. When: The seller clicks the "Save" button. Then: The system notifies the seller about the duplicate entry and prompts for modification.

6.2 Story-2: Customer Places an Order

Story # S2	: As a Customer, I want to place an order for selected products, So that I can purchase items from the platform
Priority	: High
Estimate	: XL
Reason	: Core functionality of the e-commerce platform

6.2.1 Scenario# S2.1

Scenario# S2.1	: Successful Order Placement
-----------------------	------------------------------

Prerequisite	: The customer is logged in, has added items to the cart, and has selected a payment method
Acceptance Criteria	Given: The customer proceeds to checkout. When: They enter valid shipping details and confirm the payment. Then: The system processes the order, generates an order confirmation, and sends a notification.

6.2.2 Scenario# S2.2

<i>Scenario# S2.1</i>	: Order Placement with Invalid Payment Details
Prerequisite	: The customer has added products to the cart
Acceptance Criteria	Given: The customer attempts to complete the purchase with an invalid payment method. When: The system verifies the payment details. Then: The system displays an error message and prevents order confirmation.

6.2.3 Scenario# S2.3

<i>Scenario# S2.1</i>	: Order Placement with Out-of-Stock Items
Prerequisite	: Customer has added products to the cart.
Acceptance Criteria	Given: One or more items in the customer's cart become out of stock before checkout. When: The customer tries to proceed with the order. Then: The system notifies the customer about the unavailable items and prevents checkout until cart is updated.

6.3 Story-3: Admin Removes a User Account

<i>Story # S3</i>	: As an Admin, I want to remove a user account, So that I can manage inactive or problematic users
Priority	: Medium
Estimate	: M

Reason	:	Helps maintain a secure and well-managed platform.
---------------	---	--

6.4 Story-4: Admin Views All Users

Story # S3	:	As an Admin, I want to view a list of all registered users, So that I can monitor user activity and platform usage.
Priority	:	High
Estimate	:	M
Reason	:	Ensures proper monitoring and management of users.

6.5 Story-5: Admin Views User Activity Logs

Story # S3	:	As an Admin, I want to view user activity logs, So that I can track actions performed on the platform.
Priority	:	Medium
Estimate	:	L
Reason	:	Helps in auditing and resolving disputes.

7 Test cases

Project Name:	Online Shopping	Test Designed by:	Jenil Vegad A
Module Name:	Admin Dashboard	Test Designed date:	10-02-2026
Release Version:	1.0	Test Executed by:	R. B. Gondaliya
		Test Execution date:	15-01-2023

Pre-condition: Web application should be accessible				
Test Case ID	Test Title	Test Type	Description	Test Case ID
TC_001	Verify Admin Dashboard Overview	Functional	Verify dashboard loads and shows key widgets & sections	TC_001
TC_002	View Orders List	Functional	Verify Orders page/list loads with correct columns & pagination	TC_002
TC_003	Search & Filter Orders	Functional	Verify search by Order ID/customer and filter by status/date	TC_003

Test Case Title	Verify Admin Dashboard Overview
Test Type	Functional
Test Priority	High
Pre-condition	Admin must be logged into the system

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	BUG ID
1	Open Admin Dashboard page	Open Admin Dashboard page	Dashboard loaded successfully	Pass			
2	Verify widgets: Total Users, Total Orders, Total Revenue	All widgets should be visible and show numeric values	Displayed correctly	Pass			
3	Verify "Recent Orders" section is visible	Recent orders list should appear	Section visible with orders	pass			
4	Verify charts/graphs (sales/orders) are visible	Charts should render without broken UI	Charts rendered	Pass			
5	Refresh dashboard and verify values persist	Values should reload consistently	Reloaded correctly	pass			

Test Case Title	View Orders List
Test Type	Functional
Test Priority	High
Pre-condition	Admin must be logged into the system

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID
1	Navigate to Orders from sidebar/menu	Orders page should open	Opened successfully	Pass			
2	Verify Orders table columns (Order ID, Customer, Amount, Status, Date, Actions)	All required columns should be present	Columns visible	Pass			
3	Verify list displays multiple orders	Orders should be listed with valid data	Orders listed	Pass			
4	Verify pagination (Next/Prev) or page navigation	Pagination should work correctly	Working correctly	Pass			

Test Case Title	Search & Filter Orders
Test Type	Functional
Test Priority	High
Pre-condition	Admin must be logged into the system

Test Step	Test Case Description	Expected Result	Actual Result	Status	Comment	Data	Bug ID

OSS_JENIL

Product concept

Access current weather data for any location on Earth! We collect and process weather data from different sources such as global and local weather models, satellites, radars and a vast network of weather stations. Data is available in JSON, XML, or HTML format.

POST POST

`https://api.openweathermap.org/data/2.5/weather?lat=22.303794&lon=70.802162&appid=8878ee6c3a7622ff451970f420119fe7`

PARAMS

lat	22.303794
	Latitude. If you need the geocoder to automatic convert city names and zip-codes to geo coordinates and the other way around, please use our Geocoding API
lon	70.802162
	Longitude. If you need the geocoder to automatic convert city names and zip-codes to geo coordinates and the other way around, please use our Geocoding API
appid	8878ee6c3a7622ff451970f420119fe7
	Your unique API key (you can always find it on your account page under the "API key" tab)
